

Steven Suskin
Senior Associate

Steven's 20 years of experience has helped build proficiency in many aspects of information technology. The first half of his career incorporates systems engineering, infrastructure architecture, and project management work. During the second half of his career, Steve concentrated on data management and data warehousing, emphasizing data engineering, data architecture, project management, and business intelligence using Tableau and PowerBI. Steve has a passion for building processes and systems that exceed expectations and delight end users. His experiences have allowed him to integrate both the technical and business aspects of assignments in a way that fosters trust and understanding and leads to success.

Steve wishes to help organizations adopt agile processes and tools at scale. Steve has developed approaches to using data and analytics to support improved decision-making in large projects, including One Washington and WA Cares.

Steve's other recent work focused on the areas of:

- Agile Transformation at scale
- Data Management Program Development
- Data Warehouse Cloud Architecture and implementation using Azure
- Improvements in decision support and analytics for large complex projects
- PowerBI adoption
- Project Management Quality Assurance

Steve has a Master's in Business (Finance) from the University of California Riverside and an MPH and BA from UCLA. He is a Scaled Agile (SAFe) Certified Program Consultant, a Certified Scrum Master and Project Management Institute certified Project Management Professional (PMP). In addition, Steven is certified in ITIL Foundations, TOGAF Enterprise Architecture Foundation, and has earned an MCSE.
